

THE GURUKUL INSTITUTE

PLOT 5C, 2ND FLOOR, GANAPATI COMPLEX, SEC-13, OPP. JAIPURIA SCHOOL, VASUNDHARA, GHAZIABAD (U.P)

CLASS – XII
ELECTRICITY

1. Can a charged body attract an uncharged body?
2. An oil drop of mass m and charge $-2e$ is to be held stationary in the gravitational field of the earth. What is the magnitude and direction of the electrostatic field required for this purpose.
3. \vec{E} is zero at a place, does the ϕ with same place be necessarily 0?
4. Dipole of length 2 cm is placed with its axis making an angle 60° to a uniform \vec{E} of -10^5 N/C. & it experience a torque of $8\sqrt{3}$ Nm. Calculate.
 - a. Magnitude of charge on dipole.
 - b. Potential energy of dipole.
5. Calculate potential at the centre of a square of side $\sqrt{4.5}$ m. Which carries at its four corners charges of $+5 \times 10^{-9}$ C, 2×10^{-9} C, -5×10^{-9} C, -7×10^{-9} C.
6. Two capacitor of C_1 & C_2 are connected in series. The net capacitor is $3\mu\text{F}$, when connected in parallel its value is $16 \mu\text{F}$, Calculate C_1 & C_2 .
7. Derive an expression for the energy stored in a charged parallel plate capacitor with air as the medium between its plates.
8. Two point charges A & B of value $-5\mu\text{C}$, $+6\mu\text{C}$ are kept 12 cm apart in air. Calculate the work done, when B is moved by 2 cm towards A.
9. How much work is required to be done to reduce the separation between two like charges of magnitude, $100 \mu\text{C}$ each from 20 cm to 10 cm.
10. Two capacitors of capacitance $12 \mu\text{F}$ & $6\mu\text{F}$ are connected in series with a battery. Calculate the energy stored in the $6\mu\text{F}$ capacitor.
11. Calculate the Coulomb force between 2 protons separated by a distance of 1.6×10^{-18} m.
12. An electron is separated from a proton through a distance of 53 \AA . Calculate electric field at the location of electron.
13. Find the capacitance of the capacitor?

14.
